```

POST https://studies.cs.helsinki.fi/exampleapp/new_note

Server stores new note and ask the brower to create a GET request by sending code 302

GET https://studies.cs.helsinki.fi/exampleapp/notes

HTML document

GET https://studies.cs.helsinki.fi/exampleapp/main.css

the CSS file

GET https://studies.cs.helsinki.fi/exampleapp/main.js

The broswer starts executing the JS code that
fetches the JSON from the server

GET https://studies.cs.helsinki.fi/exampleapp/data.json

[{"content": "HTML is easy", "date": "2023-1-1"}]

browser executes callback function that
renders the notes
